

EXPERIENCE

Frontend Web Developer (Intern)

Jun 2025 – Jul 2025

Yari Labs

- Architected an embeddable, high-density vendor dashboard for Shopify in **Vue.js** and **TypeScript**, engineered to seamlessly bootstrap across external storefronts.
- Designed a lightweight data-sync layer utilizing diff-based polling against backend microservices, minimizing network payloads and ensuring near-real-time data delivery.
- Mitigated main-thread blocking by implementing **lazy loading** and granular state management via **Pinia**, maintaining fluid UI performance under continuous data updates.

Co-Director & Tech Contributor

Feb 2025 – Present

CeSIUM (Uminho's Software Engineering Nucleus)

- **Leadership:** Promoted to Co-Director of the Social Dept; part of a team of 3 executing events and securing partnerships for a community of **800+ students**.
- **Contributor to CAOS:** Contributor to **Pombo**, the schedule tool used by **800 students**, and other project.
- **ENEI Tech Team:** Building the official platform for the National Meeting of Informatics Students, with **games**, **schedules**, and **business logic** serving **550+** attendees.
- **Staff at BugsByte:** Mentored participants in web development, debugging code, explaining ecosystems, and resolving complex technical blockers.

Champion & Co-Organizer of CoderCamp

Sept 2024 – Present

CoderDojo Braga

- **Leadership:** Leading a association with **100+ active mentors** and **50+ children** per session, coordinating Marketing and Curriculum departments for educational alignment.
- **CoderCamp Organizer:** Designed and ran a week-long summer camp for **30 participants** (ages 10–17) and **50 mentors**, blending a technical curriculum with outdoor soft-skills activities.
- **Operations:** Primary liaison between parents, internal teams, and volunteers, managing conflict resolution, resource allocation, and organizational transparency.

EDUCATION

Bachelor in Software Engineering

2024 – Present (Expected 2027)

University of Minho

PROJECTS

Pearl — ENEI Event Platform

Repo

- **Selected** to join the core team engineering the digital experience for **550+ attendees**, with a focus on reliability under live-event conditions.
- Built **device-agnostic** interfaces in **Phoenix LiveView**, ensuring a seamless experience across mobile and desktop.
- Implemented high-fidelity UI components with attention to **visual hierarchy** and **micro-interactions** to maximise engagement.

FlyData — High-Performance In-Memory Database (Systems Programming)

Repo

- Engineered a custom in-memory database engine in **C**, achieving a **perfect 20/20 score**.
- Maximised throughput via **SIMD**, **concurrency**, **branchless programming**, and **memory mapping**, with tailored **data structures** and **algorithms** to minimise footprint.
- Used **profiling** to identify hot paths, producing a **cache-friendly architecture** with minimal memory overhead.

SKILLS

Languages: Go, Rust, C, Elixir, TypeScript, JavaScript, SQL, Java, Python

Frameworks & Runtimes: Node.js, Phoenix LiveView, Vue.js, Next

Systems & Tools: Linux, Git, Nix, Docker

Spoken Languages: Portuguese (Native), English (Fluent — C1 Certified)
